

Dear Hiring Manager,

My name is Patrick Boudreaux, and I am a software engineer writing to express my interest in joining your team. I hold several certifications, including Project Management Professional (PMP), Microsoft's Azure Administrator (AZ-104), Azure Solutions Architect Expert (AZ-305), and Azure DevOps Engineer Expert (AZ-400). I have also completed 15 Anthropic Academy courses, including Claude API Integration, Model Context Protocol, Claude Code, Agentic Architecture, and related tracks, and I plan to get the Certified Claude Architect, Foundations (CCA-F) when the exam is publicly available.

I pulled all of these certifications together to create the Sprint Orchestrator. It is a personal project I built to run a sprint autonomously. It pulls tasks from Azure DevOps, checks them against the project's rules, and hands them off to AI coding agents. Progress is posted where I can see and act on it. I applied the PMP principles to structure how the agents pick up work, audit progress, and escalate blockers, then relied on Azure knowledge to setup and secure the service. There is more info available about this project on my virtual resume: <https://resume.patrick-boudreaux.com>.

For six years, I worked as a remote web developer for Most Electric, an electronic-component distributor based in Jackson, where I managed four WordPress sites I created and helped maintain, optimize, and extend a custom inventory management system built with .NET and SQL. For example, I used REST APIs to pull orders from the WordPress sites and update products. I also served as on-site IT and ran the full software procurement cycle. That role ended in June 2026 when All Current acquired Most Electric. I'm now an IT Specialist at All Current, working on the migration of Most's data, accounts, and software. I also provide helpdesk support and rack-and-stack work, while still maintaining the Most Electric website and inventory management software until the migration is complete.

Before this, I created my own business centered on the idea of a VR assessment tool built using Unreal Engine 4 and WordPress that would allow students to engage in their curriculum in an interactive and immersive environment. I was able to lead a team to earn several grants and awards that would move ClasScape forward. Along the way, I completed Lobaki's XR Academy in 2019, furthering my Virtual Reality and Augmented Reality development knowledge and experience. Like many startups finding their feet in early 2020, the global pandemic brought my progress to a halt. After losing momentum, I unfortunately was unable to make my dreams a reality.

Thank you for taking the time to review my application. I am genuinely excited about the prospect of contributing to your team, and I welcome the chance to discuss how I can help. Please do not hesitate to reach out if you have any questions or would like to talk further.

Sincerely,

Patrick Boudreaux
